SIGNS OF ALCOHOL POISONING

P – Puking while passed out

U – Unresponsive to pinching or shaking

B – Breathing is noisy, slow, shallow or has stopped

S – Skin is blue, cold or clammy

! – See even one? Save a life, call 911!

STANDARD DRINK SIZES

- 12 ounces of regular beer at 5% alcohol
- 5 ounces of wine at 12% alcohol
- 1.5 ounces of distilled spirits at 40% alcohol
- 8 – 10 oz of malt liquor or hard seltzer at 7% alcohol

STAY AWARE

- Be mindful of how much you have had
- Take your time
- You are unique! How alcohol impacts you will depend on what you drink, biological sex, weight, and time spent drinking.

BLOOD ALCOHOL CONCENTRATION (BAC)

BAC is the amount of alcohol that is present in the bloodstream.

Factors that impact BAC:

- Strength of the drink
- Rate of consumption
- Food consumption
- Body weight
- Drug use
- Biological sex

Signs of dangerous BAC can look like:

- Severe impairment (BAC 0.16 – 0.30%)
- Vomiting and other signs of alcohol poisoning
- All-driving related skills dangerously impaired
- Judgment and decision-making dangerously impaired
- Speech, memory, coordinator, attention, reaction time, balance significantly impaired
- Life Threatening (BAC 0.31 – 0.45%)
- Loss of consciousness
- Danger of life-threatening alcohol poisoning
- Significant risk of death in most drinkers due to suppression of vital life functions

BLACKOUT RAGE GALLON (BORG)

- BORGS are a dangerous trend that involves consuming large amounts of alcohol in a gallon-sized jug or other large container.
- They can contain up to 17 standard drinks of alcohol which can lead to a dangerous blood alcohol content (BAC).
- These can easily lead to alcohol poisoning, toxic caffeine levels, blackouts, and other serious consequences.

- You are in charge! You can control what goes in a BORG and how long you take to drink it.
- You can reduce the amount of alcohol.
- Just hydrate! You don’t have to put alcohol in a BORG.
- You can take your time.
- If you feel pressured to drink, remember it’s your call!
